

Feature:

CT-1003 PH & nbsp; Elektrode

- pH electrode is produced for laboratory and industry use
- Electrode response quickly, the measured value 95% can be reached up in several seconds
- The reference system is filled with the gel; convenient use; it is unnecessary to refilling KCL solution
- PH range: 0-14pH, temperature range: 5-60 deg. C, pressure resistance of 0.06Mp zero potential $E_0=7\text{pH}$
- The external dimension of the electrode is 12 x 120, or other length
- Unique structure preventing the electrode from easy pollution and blockage
- Sensitive, accurate, stable, long life
- Outer tube material: plastic or glass
