

Applications

This wood moisture meter is an advanced tester for measuring the moisture content of wood whose thickness is less than 20mm.

It features the LCD display, the back-light, low power consumption and direct reading. In the protective cover, there is an adjustment part which can be used to determine whether the unit is in good condition.

It has 7 measurement ranges, a wood species can only be measured in a definite range. It is compact, easy to carry and use.

Feature
