

RHB-32SG Auto Handheld Portable Beer Brewing Refractometer

Features:

This hand-held optical refractometer measures the density of sugars in the solution and gives you an instant gravity readings at any point during the boil, or run off from the mash. You do not need to convert the reading from Brix to specific gravity or do an adjustments for temperature. Great for quick and frequent check on the gravity of your running or while sparging, and also for those who do not like to deal with the temperature compensation necessary with a hydrometer. Unlike a hydrometer, it only requires a very small amount sample, about 2-3 drops of sample only. This refractometer is specifically created for brewing of BEER.

Specifications:

Scale range Brix:0-32%Wort SG:1.000-1.120

Minimum scale:Brix: 0.1%Wort SG: 0.001sg

Accuracy: Brix: 0.1%Wort

SG: 0.001sg

SIZE:Ø24.5X170mm ,

Weight :0.13KG
